

GM DEX (GMDEX.AI)

Base Builder Program — Official Loom Demo Script & Project Factsheet

Project Details & Verified Smart Contracts

Item	Verified On-Chain Value / URL
Live Web Application	https://www.gmdexai.xyz (also: gm-dex.vercel.app)
Base Builder Code (ERC-8021)	<code>bc_jr1lqf3i</code>
Base App ID (Meta Verification)	<code>6a488e6c2876ee6c1138a856</code>
GM DEX Swap Router Contract	<code>0x9dc3BBdB8817309ba42b79cc357EC6Be47030B70</code>
Liquidity Pool Router Contract	<code>0x379bB6CBd151c8A9C3da6e534E46356e17b14572</code>
Treasury Wallet	<code>0xAa81a036Bf5a2823dAA2Aadbcc66140fAb29CcE9</code>
Base Program Categories	DeFi, AI Agents, Consumer Apps

Loom Video Walkthrough Script (2 to 3 Minutes)

Scene 1: Introduction & Vision <i>Screen:</i> Open https://www.gmdexai.xyz. Highlight GM DEX header, live price ticker, and Base branding. Voiceover: "Hey Base team! I am excited to present GM DEX (GMDEX.AI) - an autonomous AI-powered decentralized exchange and consumer trading platform built natively on Base Layer 2. Our mission is to combine sub-second, low-cost Base L2 swaps with an in-built autonomous AI trading agent, making on-chain DeFi as intuitive as having a conversation - whether you are trading from desktop or using 1-click passkeys on mobile."	0:00 - 0:30
Scene 2: Autonomous GM AI Trading Terminal <i>Screen:</i> Navigate to AI Agent tab. Type <code>/balance</code> (show live on-chain balances). Type <code>/swap 1.5 USDC to ETH</code>. Show interactive swap card. Click Confirm & Execute Swap and show wallet signature and BaseScan receipt. Voiceover: "First, let us look at our flagship feature: the GM AI Agent Terminal. Users can interact with our agent using natural language or slash commands. For example, typing <code>/balance</code> instantly queries the Base blockchain for real-time wallet holdings and USD net worth. When I ask the AI to swap tokens - like <code>/swap 1.5 USDC to ETH</code> - it parses the request, fetches real-time oracle quotes via DeFiLlama, and generates an interactive swap card directly in the chat. With one click on Confirm & Execute Swap, it triggers the EVM transaction directly from the chat stream, executes on our verified router, and returns the confirmed BaseScan transaction receipt."	0:30 - 1:15
Scene 3: High-Speed Swaps & Aerodrome Liquidity <i>Screen:</i> Switch to Swap tab. Enter 0.001 ETH to show dynamic live quote calculation. Click Pools tab to show Aerodrome V2 liquidity pools (USDC/EURC, ETH/USDC, ETH/EURC). Voiceover: "Under the hood, GM DEX routes trades through verified Base smart contracts and deep Aerodrome V2 liquidity pools. We support all premier Base assets including ETH, USDC, USDT, EURC, and cbBTC, with automated slippage protection and a sustainable 0.1% protocol fee directed to the ecosystem treasury. Users can also provide liquidity to both stable and volatile pools to earn fees with 1-click LP management."	1:15 - 1:55
Scene 4: Base Builder Code (ERC-8021) & On-Chain Traction	1:55 - 2:30

Screen: Switch to BaseScan (show router 0x9dc3BBdB881... and recent swap tx). Show decoded calldata ending with bc_jr1lqf3i (8021... suffix). Briefly show dashboard.base.org.

Voiceover: "Every single transaction executed on GM DEX - whether from the main swap box or the AI terminal - is cryptographically tagged with our official Base Builder Code: bc_jr1lqf3i using the ERC-8021 standard. Our router contract is fully verified on Base Mainnet, and all transactions are actively indexed on the Base Builder Dashboard."

Scene 5: Mobile Experience & Closing

2:30 - 3:00

Screen: Toggle mobile view showing PWA install prompt, bottom navigation bar, and Coinbase Smart Wallet passkey login.

Voiceover: "GM DEX is fully PWA-enabled with Coinbase Smart Wallet passkeys, allowing mainstream users to trade on Base without app store friction or seed phrase hurdles. With support from the Base Builder Program, we will expand our autonomous AI agent features, add cross-chain bridging, and bring thousands of new on-chain users to the Base ecosystem. Thank you, and GM to everyone building on Base!"

Pro-Tips for Recording:

- **Resolution:** Record in 1080p full screen with webcam bubble in the bottom-left corner.
- **Pacing:** Keep the walkthrough brisk and under 3 minutes - grant reviewers love high-density, authentic demos.
- **Links to include in Loom description:** <https://www.gmdexai.xyz> | Builder Code: bc_jr1lqf3i | Router: 0x9dc3BBdB8817309ba42b79cc357EC6Be47030B70
